

Simple Hotwire Foam Cutter

Transformer: Primary : 0 - 230 volts. Secondary: 0 - 24 volt @ 3 - 5 amp

Super Simple bamboo bow is best because of the springiness of the bamboo, no external spring is required to keep the cutting wire under tension when the wire is hot. When heated the music wire expands slightly but a bamboo bow automatically self adjusts and keep the wire taught.

I use the smallest dia wire of the four major strings of VEENA but strings of other music instruments like SITAR, Guitor etc may also be used.
